List of Experiments

Experiment: 2

To obtain overall transfer function of a system connected in series, parallel and feedback configuration

Scilab code Solution 2.02 Block Diagram Reduction

```
// VERSION: Scilab: 5.5.2
// OS: windows 7
// CAPTION: DC motor Response

//To obtain overall transfer function of a system connected in series , parallel and feedback configuration

clc;
clear all;
p = input('enter the Co-efficient of numerator polynomial for p:');
a = input('enter the Co-efficient of denominator polynomial for p:');
```

```
q=input('enter the Co-efficient of numerator polynomial for q:');
b=input('enter the Co-efficient of denominator polynomial for q:');

C = poly([p], 's',"coeff")
D = poly([q], 's',"coeff")
X = poly([a], 's',"coeff")
Y =poly([b], 's',"coeff")

G1 = syslin('c',C,X)
G2 = syslin('c',D,Y)

x = G1*G2;
y = G1 + G2
 z =  G1 /. G2
disp(x, 'the series function of G1 & G2 is:')
disp(y,'the Parallel function of G1 & G2 is:')
disp(z,'the Feedback function of G1 & G2 is:')

// Sample output
//enter the Co-efficient of numerator polynomial for p:[1]
//enter the Co-efficient of denominator polynomial for p:[1  2]
//enter the Co-efficient of numerator polynomial for q:[4]
//enter the Co-efficient of denominator polynomial for q:[1]

// the series function of G1 & G2 is:

//       4
//     -----
  //   1 + 2s

 //the Parallel function of G1 & G2 is:
```

```

//      5 + 8s
//      --------
 //     1 + 2s

// the Feedback function of G1 & G2 is:

//        1
//      -------
 //     5 + 2s
```

Experiment: 4

Routh Stability Criterion

Scilab code Solution 4.04 Routh Hurwitz Criterion

```
// VERSION: Scilab: 5.4.2
// OS: windows 7
// CAPTION: Routh-Hurwitz Criterion

clc;
