

Scilab Manual for  
Image Processing  
by Mr Gautam Pal  
Computer Engineering  
Tripura Institute of Technology<sup>1</sup>

Solutions provided by  
Mr R.Senthilkumar- Assistant Professor  
Electronics Engineering  
Institute of Road and Transport Technology

June 30, 2026

<sup>1</sup>Funded by a grant from the National Mission on Education through ICT, <http://spoken-tutorial.org/NMEICT-Intro>. This Scilab Manual and Scilab codes written in it can be downloaded from the "Migrated Labs" section at the website <http://scilab.in>

# Contents

List of Scilab Solutions	4
1 Distance and Connectivity: To understand the notion of connectivity and neighborhood defined for a point in an image.	6
2 Image Arithmetic - To learn to use arithmetic operations to combine images.	8
3 Image Arithmetic –To study the effect of these operations on the dynamic range of the output image.	11
4 Image Arithmetic –To study methods to enforce closure forces the output image to also be an 8 bit image.	15
5 Affine Transformation - To learn basic image transformation i) Translation ii) Rotation iii) Scaling	19
6 Affine Transformation –To learn the role of interpolation operation i) Bi-linear ii) Bi-cubic iii) nearest neighbor	21
7 Affine Transformation –To learn the effect of multiple transformations i) Significance of order in which one carried out	23
8 Point Operations - To learn image enhancement through point transformation-i)Linear transformation ii) Non-linear transformation	25
9 Neighborhood Operations - To learn about neighborhood	

operations and use them for i) Linear filtering ii) Non-linear filtering	28
10 Neighborhood Operations –To study the effect of the size of neighborhood on the result of processing	30
11 Image Histogram - To understand how frequency distribution can be used to represent an image.	32
12 Image Histogram –To study the correlation between the visual quality of an image with its histogram.	35
13 Fourier Transform: To understand some of the fundamental properties of the Fourier transform.	38
14 Colour Image Processing: To learn colour images are handled and processed i)Models for representing colour ii) Methods of proces	40
15 Morphological Operations: To understand the basics of morphological operations which are used in analyzing the form and shape de	43
