codes written in it can be downloaded from the "Textbook Companion Project"
section at the website <http://scilab.in>

Book Description

Title: Analog Integrated Circuits

Author: P. Sharma

Publisher: S.K. Kataria & Sons, New Delhi

Edition: 2

Year: 2009

ISBN: 81-89757-74-1

Scilab numbering policy used in this document and the relation to the above book.

Exa Example (Solved example)

Eqn Equation (Particular equation of the above book)

AP Appendix to Example(Scilab Code that is an Appednix to a particular Example of the above book)

For example, Exa 3.51 means solved example 3.51 of this book. Sec 2.3 means a scilab code whose theory is explained in Section 2.3 of the book.

Contents

List of Scilab Codes	4
1 Differential Amplifiers	5
2 Opamp Fundamentals	31
3 Opamp with negative feedback	35
4 Basic application of an opamp	41
5 Waveform Generators	51
6 Active Filters	64
7 Non Linear Circuits	79
8 Analog Multiplier and Operational Transconductance Amplifier	81
9 Voltage Regulators	84

List of Scilab Codes

Exa 1.1	Find various parameters of Differential Amplifier	5
Exa 1.2	Calculate output voltage and CMRR in dB	6
Exa 1.3	Find output voltage of Differential Amplifier	6
Exa 1.4	Calculate differential mode and common mode output voltages	7
Exa 1.5	Find magnitude of differential mode gain and common mode gain and small signal CMRR	8
Exa 1.6	Design a dual input balanced output differential amplifier	9
Exa 1.7	Design a dual input balanced output differential amplifier	9
Exa 1.8	Calculate various parameters of differential amplifier	10
Exa 1.9	Design a two transistor current source	12
Exa 1.10	Determine Load current	12
Exa 1.11	Design a two transistor pnp current source	14
Exa 1.12	Determine various parameters of differential amplifier	14
Exa 1.13	Design Differential Amplifier	15
Exa 1.14	Design Differential Amplifier	16
Exa 1.15	Find differential input resistance	16
Exa 1.16	Find out the value of resistor R_C	17
Exa 1.17	Calculate various parameters of differential amplifier	18
Exa 1.18	Design a three transistor current source	19
Exa 1.19	Design a Widlar current source	19

Exa 1.20	Design a Widlar current source with multiple output transistor	20
Exa 1.21	Calculate current through resistor R_C and collector current of each transistor	21
Exa 1.22	Design current steering circuit	21
Exa 1.23	Determine various parameters of differential amplifier	22
Exa 1.24	Determine various parameters of differential amplifier	23
Exa 1.25	Determine smallest possible and largest possible input offset current	26
Exa 1.26	Determine various parameters of differential amplifier	27
Exa 1.27	Design a level shifter circuit	29
Exa 2.2	Calculate two base bias current	31
Exa 2.3	Calculate output voltage	31
Exa 2.4	Find out 741C opamp can be used or not . .	32
Exa 2.5	Find the rise time	32
Exa 2.6	Find out the time for output change	33
Exa 2.7	Calculate maximum voltage	33
Exa 2.8	Find the limiting frequency	34
Exa 3.1	Determine various parameters of differential amplifier	35
Exa 3.2	Design closed loop non inverting amplifier .	36
Exa 3.3	Design closed loop non inverting amplifier .	36
Exa 3.4	Design inverting amplifier	37
Exa 3.5	Determine various parameters of opamp . . .	37
Exa 3.6	Design an inverting summing amplifier . . .	38
Exa 3.7	Design inverting opamp circuit	39
Exa 3.8	Design inverting opamp circuit	39
Exa 3.9	Design preamplifier for a microphone	40
Exa 4.2	Determine V_o for adder subtractor	41
Exa 4.3	Find values for constant A and B	42
Exa 4.4	Determine values of unknown resistors	42
Exa 4.5	Determine output of the circuit	43
Exa 4.7	Determine output of the circuit	43
Exa 4.8	Determine input impedance	44

Exa 4.9	Determine the gain for an instrumentation amplifier	45
Exa 4.10	Determine output voltage for an instrumentation amplifier	45
Exa 4.12	Determine an instrumentation amplifier	46
Exa 4.13	Calculate output voltage	47
Exa 4.15	Design a practical integrator circuit	48
Exa 4.16	Design a circuit	48
Exa 4.22	Design a practical differentiator	49
Exa 4.25	Design a practical differentiator circuit	50
Exa 5.1	Design a square wave generator	51
Exa 5.2	Design a square wave generator	51
Exa 5.3	Determine output signal frequency	52
Exa 5.4	Design a circuit to produce an asymmetrical wave	52
Exa 5.5	Design a circuit to produce an square wave	53
Exa 5.6	Determine frequency of oscillation and duty cycle	54
Exa 5.7	Design an astable multivibrator	54
Exa 5.8	Design 555 timer as an astable multivibrator	55
Exa 5.9	Design 555 timer as an astable multivibrator	56
Exa 5.10	Design an astable multivibrator	56
Exa 5.11	Design IC555 as a monostable multivibrator	57
Exa 5.12	Design a timer circuit using IC555	57
Exa 5.13	Find out the value of R	58
Exa 5.14	Design a triangular wave generator	59
Exa 5.15	Find amplitude and frequency	59
Exa 5.16	Design a phase shift oscillator	60
Exa 5.17	Design a Wein bridge oscillator	61
Exa 5.19	Determine frequency of oscillation	61
Exa 5.20	Determine various parameters of opamp	62
Exa 5.21	Calculate free running frequency lock range and capture range	62
Exa 5.22	Determine frequency of reference oscillator	63
Exa 6.2	Determine cut off frequency	64
Exa 6.3	Design a first order low pass filter	64
Exa 6.4	Using frequency scaling change the cut off frequency	65

Exa 6.5	Design a first order high pass filter	66
Exa 6.6	Design a filter using sallen key unity gain low pass active filter	66
Exa 6.7	Determine the type and frequency of filter . .	67
Exa 6.8	Design a filter using sallen key equal compo- nent low pass active filter	68
Exa 6.9	Calculate critical frequency	68
Exa 6.10	Design a second order low pass filter	69
Exa 6.11	calculate 3dB frequency filter type and pass band gain	70
Exa 6.12	Design a second order high pass filter	70
Exa 6.13	Design a band pass filter	71
Exa 6.14	Design a band pass filter with single opamp .	72
Exa 6.15	Design a filter to meet the specifications . .	73
Exa 6.16	Determine type of filter to produce given phase shift	74
Exa 6.17.a	Find type of response	75
Exa 6.17.b	Determine low and high cut off frequency . .	75
Exa 6.17.c	Determine band pass center frequency	76
Exa 6.17.d	Determine band pass bandwidth	77
Exa 6.17.e	Determine band pass gain at center frequency	78
Exa 7.3	Design a schmitt trigger	79
Exa 7.4	Determine threshold voltages and hysteresis voltage	79
Exa 7.5	Design a schmitt trigger circuit	80
Exa 8.1	Find Transfer Function	81
Exa 8.2	Find Transfer Function	82
Exa 8.3	Find Transfer Function	82
Exa 8.4	Find Transfer Function	83
Exa 9.1	Obtain 18 v from 15 volt regulator	84
Exa 9.2	Design a current source using 7808 regulator	84
Exa 9.3	Calculate output current	85
Exa 9.4	Design adjustable voltage regulator using LM317	87
Exa 9.5	Calculate minimum and maximum output volt- age	87
Exa 9.6	Design a voltage regulator using IC723 . . .	88
Exa 9.7	Design a voltage regulator using IC723 . . .	89
Exa 9.8	Design a regulated power supply	89

Chapter 1

Differential Amplifiers

Scilab code Exa 1.1 Find various parameters of Differential Amplifier

```
1 //Exa 1.1
2 clc;
3 clear;
4 close;
5 //given data
6 Icq=100; //in uA
7 BETAac=100; //unitless
8 BETAdc=100; //unitless
9 Ad=100; //unitless
10 CMRRdB=60; //in dB
11 //part (a)
12 IE=2*Icq; //in UA
13 VT=25; //in mV
14 re=2*VT/IE; //in ohm
15 RC=Ad*re; //in Kohm
16 CMRR=10^(CMRRdB/20); //using formula CMRRdB=20log10 (
    CMRR)
17 //calculate RE using formula CMRR=1+2*RE/re
18 RE=((CMRR-1)*re)/2; //in Kohm
19 disp("Value of RC is "+string(RC)+" Kohm" +" and "
    "value of RE is "+string(RE)+" Kohm");
```

```

20 // part (b)
21 Ri1=2*BETAac*re; //in kohm
22 Ri2=2*BETAAc*re; //in kohm
23 disp("Value of Ri1 is "+string(Ri1)+" Kohm" +" and
      value of Ri2 is "+string(Ri2)+" Kohm");
24 // part (c)
25 Ric=BETAac*(re+2*RE); //in kohm
26 disp("Value of Ric is "+string(Ric)+" Kohm.");

```

Scilab code Exa 1.2 Calculate output voltage and CMRR in dB

```

1 //Exa 1.2
2 clc;
3 clear;
4 close;
5 //given data
6 V1=50; //in uV
7 V2=-50; //in uV
8 Ad=2000; //unitless
9 Ac=0.5; //unitless
10 Vid=V1-V2; //in uV
11 Vc=(V1+V2)/2; //in uV
12 //output voltage
13 Vo=Ad*Vid+Ac*Vc; //in uV
14 Vo=Vo*10^(-6); //in Volts
15 CMRRdB=20*log10(Ad/Ac);
16 disp(Vo,"Output voltage in volts is : ");
17 disp(CMRRdB,"CMRR in dB is : ");

```

Scilab code Exa 1.3 Find output voltage of Differential Amplifier

```

1 //Exa 1.3
2 clc;

```

```

3 clear;
4 close;
5 //given data
6 V1=5; //in mV
7 V2=6; //in mV
8 Ad=70; //in dB
9 CMRR=90; //in dB
10 Vid=V2-V1; //in mV
11 Vc=(V1+V2)/2; //in mV
12 Ad=10^(Ad/20); //unitless
13 Ad=floor(Ad);
14 CMRR=10^(CMRR/20); //unitless
15 //output voltage
16 Vo=Ad*(Vid+Vc/CMRR); //in mV
17 Vo=round(Vo);
18 Vo=Vo*10^(-3); //in Volts
19 Vid=Vid*10^(-3); //in Volts
20 ErrorVotage=Vo-Ad*Vid;
21 PercentageError=(ErrorVotage*100)/Vo;
22 disp(Vo,"Output voltage in volts is : ");
23 disp(ErrorVotage,"ErrorVotage is : ");
24 disp(PercentageError,"PercentageError is : ")

```

Scilab code Exa 1.4 Calculate differential mode and common mode output voltages

```

1 //Exa 1.4
2 clc;
3 clear;
4 close;
5 //given data
6 V1=5; //in uV
7 V2=4; //in uV
8 Ad=80; //in dB
9 CMRR=100; //in dB
10 Ad=10^(Ad/20); //unitless

```

```

11 CMRR=10^(CMRR/20); // unitless
12 // differential mode output voltage
13 Vid=V1-V2; // in uV
14 Vod=Ad*Vid; // in uV
15 Vod=Vod*10^(-3); // in mV
16 // common mode output voltage
17 Vc=(V1+V2)/2; // in uV
18 Ac=Ad/CMRR; // unitless
19 Voc=Ac*Vc; // in uV
20 disp(Vod," Differential mode output voltage in mV is
   : ")
21 disp(Voc," common mode output voltage in uV is : ")

```

Scilab code Exa 1.5 Find magnitude of differential mode gain and common mode gain

```

1 //Exa 1.5
2 clc;
3 clear;
4 close;
5 //given data
6 Rc=2; //in kohm
