codes written in it can be downloaded from the "Textbook Companion Project"  
section at the website <http://scilab.in>

# **Book Description**

**Title:** Analog and Digital Communication

**Author:** S. Sharma

**Publisher:** S. K. Kataria & Sons, New Delhi

**Edition:** 3

**Year:** 2012

**ISBN:** 81-89757-52-0

Scilab numbering policy used in this document and the relation to the above book.

**Exa** Example (Solved example)

**Eqn** Equation (Particular equation of the above book)

**AP** Appendix to Example(Scilab Code that is an Appednix to a particular Example of the above book)

For example, Exa 3.51 means solved example 3.51 of this book. Sec 2.3 means a scilab code whose theory is explained in Section 2.3 of the book.

# Contents

<b>List of Scilab Codes</b>	<b>4</b>
<b>2 Amplitude Modulation</b>	<b>5</b>
<b>3 Radio Transmitters</b>	<b>23</b>
<b>4 Radio Receivers</b>	<b>27</b>
<b>5 Angle Modulation</b>	<b>33</b>
<b>6 Noise</b>	<b>76</b>
<b>7 Sampling Theory and Pulse Modulation</b>	<b>92</b>
<b>8 Waveform Coding Techniques</b>	<b>97</b>
<b>10 Digital multiplexers</b>	<b>112</b>
<b>11 Information Theory</b>	<b>117</b>

# List of Scilab Codes

Exa 2.1	frequency range of sidebands . . . . .	5
Exa 2.2	Bandwidth of modulated signal . . . . .	6
Exa 2.3	total power in amplitude modulated wave .	7
Exa 2.4	Carrier Power . . . . .	7
Exa 2.5	antenna current and percentage modulation	8
Exa 2.6	carrier current and modulation of signal and modulation index of second signal . . . . .	9
Exa 2.7	modulating volatage and minimum and max- imum voltage . . . . .	10
Exa 2.9	percentage modulation index . . . . .	10
Exa 2.10	percentage modulation index of second wave	11
Exa 2.11	total radiated power . . . . .	12
Exa 2.12	total radiated power . . . . .	13
Exa 2.13	percentage power saving . . . . .	14
Exa 2.15	percentage power saving . . . . .	15
Exa 2.16	power content of carrier and upper and lower sidebands . . . . .	16
Exa 2.17	percentage modulation index . . . . .	16
Exa 2.18	percentage modulation index . . . . .	17
Exa 2.21	carrier power and transmission efficiency and carrier amplitude . . . . .	18
Exa 2.29	modulation depth . . . . .	19
Exa 2.31	percentage power saving . . . . .	20
Exa 2.32	carrier frequency . . . . .	21
Exa 3.1	total radiated power . . . . .	23
Exa 3.2	carrier frequency and frequency deviation .	24
Exa 3.3	appropriate multiplexer values and oscillator frequency . . . . .	25

Exa 4.1	image frequency and image rejection ratio . . . . .	27
Exa 4.2	image frequency and image rejection ratio . . . . .	28
Exa 4.3	quality factor and new intermediate frequency . . . . .	29
Exa 4.5	oscillator frequency and image frequency and image rejection ratio . . . . .	30
Exa 4.6	image frequency and image rejection ratio and intermediate frequency . . . . .	31
Exa 5.1	carrier frequency and modulating frequency and modulation index and maximum deviation and power dissipated . . . . .	33
Exa 5.2	carrier frequency and highest and lowest frequency and modulation index . . . . .	34
Exa 5.3	frequency deviation and carrier swing and lowest frequency of modulated wave . . . . .	35
Exa 5.4	modulation index . . . . .	36
Exa 5.5	percentage modulation index . . . . .	36
Exa 5.6	bandwidth of FM transmission . . . . .	37
Exa 5.7	bandwidth of narrowband FM signal . . . . .	38
Exa 5.8	bandwidth of a signal when modulating amplitude is doubled . . . . .	38
Exa 5.9	modulation index and bandwidth of FM signal . . . . .	39
Exa 5.10	modulating frequency . . . . .	40
Exa 5.11	modulation index and bandwidth of FM and PM signal . . . . .	40
Exa 5.12	carrier frequency and modulating frequency and modulation index and maximum deviation and power dissipated . . . . .	42
Exa 5.13	frequency deviation for given modulating voltage . . . . .	43
Exa 5.14	modulation index . . . . .	44
Exa 5.15	bandwidth of FM and DSB FC signal . . . . .	45
Exa 5.16	representation of FM and PM signal or wave . . . . .	46
Exa 5.17	carrier amplitude and amplitude of sidebands and minimum and maximum frequency of sidebands . . . . .	47
Exa 5.18	maximum frequency deviation and modulation index . . . . .	48
Exa 5.19	modulation index and bandwidth of a signal . . . . .	49
Exa 5.20	capacitive reactance . . . . .	51

Exa 5.21	carrier frequency and frequency deviation and modulation index and minimum and maximum frequency at a given point . . . . .	51
Exa 5.22	modulation index for minimum and maximum modulating frequency of FM signal . . . . .	53
Exa 5.23	modulation index and equation for carrier waveform . . . . .	54
Exa 5.24	frequency sensitivity and modulation index .	55
Exa 5.29	bandwidth of FM signal using carsons rule .	56
Exa 5.30	fracation of signal power included in the frequency band . . . . .	57
Exa 5.31	bandwidth of FM signal . . . . .	58
Exa 5.32	Carrier Power and power in each sideband .	59
Exa 5.33	carrier swing and modulation index and highest and lowest frequency attained by FM signal	60
Exa 5.34	frequency deviation and carrier frequency and lower frequency reached by modulated FM wave . . . . .	60
Exa 5.35	percentage modulation index . . . . .	61
Exa 5.36	frequency deviation and modulation index .	62
Exa 5.37	carrier frequency and modulating frequency and modulation index and maximum frequency deviation and power dissipated in FM wave	63
Exa 5.39	maximum frequency deviation . . . . .	64
Exa 5.43	bandwidth of angle modulated signal . . . .	65
Exa 5.44	modulation index and bandwidth of FM signal	66
Exa 5.45	bandwidth of angle modulated signal . . . .	67
Exa 5.46	bandwidth of FM signal . . . . .	68
Exa 5.47	bandwidth and frequency deviation of FM signal . . . . .	69
Exa 5.48	bandwidth calculation using the given formula and carsons rule . . . . .	70
Exa 5.49	frequency multiplication and maximum frequency deviation . . . . .	71
Exa 5.50	maximum frequency deviation and carrier frequency for given maximum and minimum frequencies . . . . .	72

Exa 5.51	multiplier and mixer oscillating frequency for Armstrong type FM generator . . . . .	73
Exa 5.52	frequency multiplication . . . . .	74
Exa 6.1	rms noise voltage . . . . .	76
Exa 6.2	rms noise voltage . . . . .	77
Exa 6.3	rms voltage due individual resistance and resistances in parallel and series . . . . .	77
Exa 6.4	equivalent input noise resistance . . . . .	78
Exa 6.7	output voltage across the circuit measured by a wide band voltmeter . . . . .	79
Exa 6.8	noise figure and equivalent temperature . . .	80
Exa 6.9	noise figure . . . . .	81
Exa 6.10	overall noise figure . . . . .	82
Exa 6.11	overall noise figure . . . . .	83
Exa 6.12	rms noise voltage . . . . .	83
Exa 6.14	meter reading in volts and resistance at given temperature . . . . .	84
Exa 6.16	overall noise figure of three stage cascade amplifier . . . . .	85
Exa 6.17	overall noise figure of two stage cascaded amplifier . . . . .	86
Exa 6.18	overall noise figure and overall gain . . . . .	87
Exa 6.19	overall noise figure . . . . .	88
Exa 6.20	noise temperature of the receiver and overall noise temperature . . . . .	89
Exa 6.21	overall noise temperature of the receiver and overall noise figure . . . . .	90
Exa 7.1	Nyquist rate . . . . .	92
Exa 7.2	Nyquist rate and Nyquist interval . . . . .	93
Exa 7.3	discrete time signal for the given conditions	94
Exa 7.4	Nyquist rate for the continuous signal . . . .	95
Exa 8.2	code word length and transmission bandwidth and final bit rate and quantization noise ratio	97
Exa 8.3	number of bits required and bandwidth of pcms and signalling rate . . . . .	98
Exa 8.4	sampling rate and number of bits in each PCM and bit rate and transmission bandwidth . .	99
Exa 8.5	transmission bandwidth and sampling frequency	100

Exa 8.6	message bandwidth and signal to noise ratio	101
Exa 8.7	number of bits in codeword and sampling rate and bit rate . . . . .	102
Exa 8.8	signal to the noise ratio . . . . .	103
Exa 8.10	signal to the noise ratio and number of bits	104
Exa 8.11	maximum frequency . . . . .	104
Exa 8.13	maximum amplitude . . . . .	105
Exa 8.14	signalling rate . . . . .	106
Exa 8.15	signal to the noise ratio of linear delta mod- ulation system . . . . .	107
Exa 8.16	signal to the noise ratio . . . . .	107
Exa 8.17	sampling frequency and number of binary dig- its and quantizing level . . . . .	108
Exa 8.20	number of required levels and signal to noise ratio . . . . .	109
Exa 8.21	quantizing levels and number of bits and band- width . . . . .	110
Exa 10.1	sampling rate . . . . .	112
Exa 10.2	signalling rate and channel bandwidth . . .	113
Exa 10.3	spacing between successive pulses of multi- plexed signal . . . . .	114
Exa 10.4	signaling rate and channel bandwidth . . . .	115
Exa 11.1	information content of given symbols . . . .	117
Exa 11.2	amount of information for a given probability of a symbol . . . . .	118
Exa 11.3	amount of information content wrt to binary PCMs . . . . .	119
Exa 11.4	amount of information content wrt to binary PCMs . . . . .	119
Exa 11.9	entropy and amount of information for the given messages . . . . .	120
Exa 11.12	average rate of information conveyed . . . .	121
Exa 11.13	average information rate . . . . .	122
Exa 11.14	entropy and rate of information for given porba- bilities . . . . .	123
Exa 11.15	information rate of given symbols probabilities	124
Exa 11.16	entropy and rate of information of given sym- bols . . . . .	125

Exa 11.17	rate of information . . . . .	126
Exa 11.18	rate of information . . . . .	126
Exa 11.19	channel matrix and joint probabilities . . . . .	127
Exa 11.20	channel matrix and probabilities . . . . .	128
Exa 11.21	probabilities associated with the channel outputs . . . . .	129
Exa 11.28	mutual information . . . . .	130
Exa 11.32	entropy for the given probability density function . . . . .	131
Exa 11.35	capacity of the channel . . . . .	132
Exa 11.37	efficiency of the code and code redundancy . . . . .	132
Exa 11.38	efficiency of the code and code redundancy . . . . .	133
Exa 11.44	efficiency of shannon fano code . . . . .	134
Exa 11.46	efficiency of shannon fano code and huffman code . . . . .	135
Exa 11.47	efficiency of huffman code . . . . .	137
Exa 11.49	variance of codeword length . . . . .	138
Exa 11.50	entropy of the system and information rate . . . . .	139
Exa 11.51	entropy . . . . .	140
Exa 11.52	entropy of the second order extension . . . . .	141
Exa 11.54	entropy of the source . . . . .	142
Exa 11.55	average number of bits . . . . .	143
Exa 11.56	information capacity of the telephone channel	144

# Chapter 2

## Amplitude Modulation

Scilab code Exa 2.1 frequency range of sidebands

```
1 //ANALOG AND DIGITAL COMMUNICATION
2 //BY Dr.SANJAY SHARMA
3 //CHAPTER 2
4 //AMPLITUDE MODULATION
5 clear all;
6 clc;
7 printf("EXAMPLE 2.1(PAGENO 51)");
8 // given
9 L = 50*10^-6 //in henry
10 C = 1*10^-9 //in farads
11 //calculation
12 F_c = 1/(2*pi*sqrt(L*C));
13 //results
14 printf("\n\nCarrier frequency F_c = %.2f Hz",F_c);
15 printf("\n\nNow , it is given that the highest
modulation frequency is 8KHz ");
16 printf("\n\nTherefore , the frequency range occupied
by the sidebands will range from 8KHz \nabove to
8KHz below the carrier frequency , extending fom
712KHz to 720KHz.");
```

---

### Scilab code Exa 2.2 Bandwidth of modulated signal

```
1 //ANALOG AND DIGITAL COMMUNICATION
2 //BY Dr.SANJAY SHARMA
3 //CHAPTER 2
4 //AMPLITUDE MODULATION
5 clear all;
6 clc;
7 printf("EXAMPLE 2.2(PAGENO 51)");
8
9 //given
10 //v_m = 10*sin(2*pi*10^3*t)
11 //by comparing with v_m = V_m*sin(2*pi*f_c*t) we
   get
12 V_m = 10//in volts
13 f_m = 1*10^3//in hertz
14 V_c = 20//in volts
15 f_c = 1*10^4//in hertz
16
17 //calculations
18 m_a = V_m/V_c;//modulation index formula
19 m_a1 = m_a*100;//percentage modulation index
20 f_usb = f_c + f_m;//Upper sideband
21 f_lsb = f_c - f_m;//lower sideband
22 A = (m_a*V_c)/2//amplitude of upper as well as lower
   sideband
23 B = 2*f_m;//bandwidth of the modulation signal
24
25 //results
26 printf("\n\n a. Modulation index=%f",m_a);
27 printf("\n\n b. Percentage modulation index=%f
   percent",m_a1);
28 printf("\n\n c. Upper sidebandfrequency=%f Hz",
   f_usb);
```

```
29 printf("\n\n      b.Lower sideband frequency=%f Hz ",  
      f_lsb);  
30 printf("\n\niii.Amplitude of Upper sideband and  
      Lower sideband =%f V",A);  
31 printf("\n\niv.Bandwidth of th modulation signal=%f  
      Hz",B);
```

---

### Scilab code Exa 2.3 total power in amplitude modulated wave

```
1 //ANALOG AND DIGITAL COMMUNICATION  
2 //BY Dr.SANJAY SHARMA  
3 //CHAPTER 2  
4 //AMPLITUDE MODULATION  
5 clear all;  
6 clc;  
7 printf("EXAMPLE 2.3(PAGENO 54)");  
8  
9 //given  
10 m_a = .75; //modulation index  
11 P_c = 400; //carrier power in watts  
12  
13 //calculation  
14 P_t = P_c*(1+(m_a^2/2)); //total power  
15  
16 //results  
17 printf("\n\nTotal power in the amplitude modulated  
      wave=%.2 f W",P_t);
```

---

### Scilab code Exa 2.4 Carrier Power

```
1 //ANALOG AND DIGITAL COMMUNICATION  
2 //BY Dr.SANJAY SHARMA  
3 //CHAPTER 2
```

```

4 //AMPLITUDE MODULATION
5 clear all;
6 clc;
7 printf("EXAMPLE 2.4(PAGENO 54)");
8 //given
9 P_t = 10*10^3; //total power in watts
10 m_a = .6; //modulation index
11 //calculation
12 P_c = (P_t/(1+(m_a^2/2))); // carrier power
13 //results
14 printf("\n\nCarrier power=%f W", P_c);

```

---

### Scilab code Exa 2.5 antenna current and percentage modulation

```

1 //ANALOG AND DIGITAL COMMUNICATION
2 //BY Dr.SANJAY SHARMA
3 //CHAPTER 2
4 //AMPLITUDE MODULATION
5 clear all;
6 clc;
7 printf("EXAMPLE 2.5(PAGENO 55)");
8
9 //given
10 I_t = 8.93; //total modulated current in ampers
11 I_c= 8; //carrier or unmodulated current in ampers
12 //calculation
13 m_a = sqrt(2*((I_t/I_c)^2 -1)); //formula for
    modulation index
14 M_a=m_a*100; //percentage modulation
15 //for
16 m_a1 = .8; //given modulation index
17
18 //calculation
19 I_t1 = I_c*sqrt(1+(m_a1^2/2)); //new antenna current
20

```

```

21 // results
22 printf("\n\ni.a. Modulation index = %.2f",m_a);
23 printf("\n\n b. Percentage modulation index = %.2f
percent",M_a);
24 printf("\n\nii. Antenna current=% .2f A",I_t1);

```

---

**Scilab code Exa 2.6 carrier current and modulation of signal and modulation index**

```

1 //ANALOG AND DIGITAL COMMUNICATION
2 //BY Dr.SANJAY SHARMA
3 //CHAPTER 2
4 //AMPLITUDE MODULATION
5 clear all;
6 clc;
7 printf("EXAMPLE 2.6(PAGENO 56)");
8
9 //given
10 I_t1 = 10 //antenna current in amps
11 m1 = .3 //modulation index
12 I_t2 = 11 //increased antenna current
13
14 //calculation
15 I_c = (I_t1/(1+(m1^2/2))^ .5); //formula for carrier
signal current
16 m_t = sqrt(2*((I_t2/I_c)^2 - 1)); //formula for
modulation index
17 m2 = sqrt(m_t^2 - m1^2);
18 m3 = m2*100; //percentage modulation index
19
20 //results
21 printf("\n\ni.CARRIER signal current = %.2f A",I_c);
22 printf("\n\nii.Modulation index of signal = %.2f",
m_t);
23 printf("\n\niii.a.Modulation index of second signal
= %.2f",m2);

```

```
24 printf("\n\n      b. Percentage modulation index of  
           second signal = %.2f percent",m3);
```

---

**Scilab code Exa 2.7 modulating volatage and minimum and maximum voltage**

```
1 //ANALOG AND DIGITAL COMMUNICATION  
2 //BY Dr.SANJAY SHARMA  
3 //CHAPTER 2  
4 //AMPLITUDE MODULATION  
5 clear all;  
6 clc;  
7 printf("EXAMPLE 2.7(PAGENO 56)");  
8  
9 //given v_c = 10*sinwt  
10  
11 m = .5 //modulation index  
12 //by comparing with v_c = V_c*sinwt  
13 V_c = 10 //carrier voltage in volts  
14  
15 //calculation  
16 V_m = m*V_c; //amplitude of modulating index  
17 V_max = V_c + V_m; //maximum voltage  
18 V_min = V_c - V_m; //minimum voltage  
19  
20 //results  
21 printf("\n\n i. Modulating voltage = %.2f V",V_m);  
22 printf("\n\n ii. Maximum voltage = %.2f V",V_max);  
23 printf("\n\n iii. Minimum voltage = %.2f V",V_min);
```

---

**Scilab code Exa 2.9 percentage modulation index**

```
1 //ANALOG AND DIGITAL COMMUNICATION  
2 //BY Dr.SANJAY SHARMA
```

```

3 //CHAPTER 2
4 //AMPLITUDE MODULATION
5 clear all;
6 clc;
7 printf("EXAMPLE 2.9(PAGENO 57)");
8
9 //given
10 V_max = 4//maximum voltage in volts
11 V_min = 1//minimum voltage in volts
12
13 //calculation
14 m = (V_max - V_min)/(V_max + V_min) ;//formula for
    modulation index
15 m1 = m*100//percentage modultion index
16
17 //result
18 printf("\n\n Percentage modulation index = %.2f
    percent",m1);

```

---

**Scilab code Exa 2.10 percentage modulation index of second wave**

```

1 //ANALOG AND DIGITAL COMMUNICATION
2 //BY Dr.SANJAY SHARMA
3 //CHAPTER 2
4 //AMPLITUDE MODULATION
5 clear all;
6 clc;
7 printf("EXAMPLE 2.10(PAGENO 57)");
8
9 //given
10 m1 = .4//modulation index
11 I_t1 = 11//initial antenna current in ampers
12 I_t2 = 12//final antenna current in ampers
13
14 //calculations

```

```

15 I_c = (I_t1/(1+(m1^2/2))^0.5); // formula for carrier
   current in ampers
16 m_t = sqrt(2*((I_t2/I_c)^2 - 1)); // total modulation
   index
17 m2 = sqrt(m_t^2 - m1^2); // modulation index to the
   second wave
18 m3 = m2*100; // percentage modulation index to the
   second wave
19
20 // results
21 printf("\n\n Carrier current = %.2f A", I_c);
22 printf("\n\n Total modulation index = %.2f", m_t);
23 printf("\n\n Percentage modulation index of second
   wave= %.2f percent", m3);

```

---

### Scilab code Exa 2.11 total radiated power

```

1 //ANALOG AND DIGITAL COMMUNICATION
2 //BY Dr.SANJAY SHARMA
3 //CHAPTER 2
4 //AMPLITUDE MODULATION
5 clear all;
6 clc;
7 printf("EXAMPLE 2.11(PAGENO 58)");
8
9 // given
10 P_c = 10*10^3 // carrier power in watts

12 m_2 = .5 // modulation index of second wave
13
14 // calculations
15 m_1 = sqrt(2*((P_t/P_c)-1)); // modulation index of
   first wave
16 m_t = sqrt(m_1^2 + m_2^2); // total modulation index
17 P_t1 = P_c*(1+(m_t^2/2)) // total new transmitted

```

```

    power
18
19 // results
20 printf("\n\nModulation index of first wave = %.4f",
21     m_1);
21 printf("\n\nTotal modulation index = %.2f",m_t);
22 printf("\n\nTotal new transmitted power = %.2f W",
23     P_t1);

```

---

### Scilab code Exa 2.12 total radiated power

```

1 //ANALOG AND DIGITAL COMMUNICATION
2 //BY Dr.SANJAY SHARMA
3 //CHAPTER 2
4 //AMPLITUDE MODULATION
5 clear all;
6 clc;
7 printf("EXAMPLE 2.12(PAGENO 60)");
8
9 //given
10 P_t = 10.125*10^3 //modulated or total power in watts
11 P_c = 9*10^3 //unmodulated or carrier power
12 m_2 = .4 //modulation index of second wave
13
14 //calculations
15 m_1 = sqrt(2*((P_t/P_c) - 1)) //modulation index of
   first wave
16 m_a = m_1*100 //percentage modulation index of first
   wave
17 m_t = sqrt(m_1^2 + m_2^2) //total modulation index
18 P_t1 = P_c*(1+(m_t^2/2)) //total radiated power
19
20 //results
21 printf("\ni.a.Modulation index of first wave = %.4
   f",m_1);

```

```
22 printf("\n\n b.Percentage modulation index of first  
wave = %.2f percent",m_a);  
23 printf("\n\nii.Total radiated power = %.2f W",P_t1);

---

```

### Scilab code Exa 2.13 percentage power saving

```
1 //ANALOG AND DIGITAL COMMUNICATION  
2 //BY Dr.SANJAY SHARMA  
3 //CHAPTER 2  
4 //AMPLITUDE MODULATION  
5 clear all;  
6 clc;  
7 printf("EXAMPLE 2.13(PAGENO 90)");
