codes written in it can be downloaded from the "Textbook Companion Project"
section at the website <http://scilab.in>

Book Description

Title: A Textbook Of Engineering Physics

Author: M. N. Avadhanulu, And P. G. Kshirsagar

Publisher: S. Chand And Company, New Delhi

Edition: 9

Year: 2011

ISBN: 81-219-0817-5

Scilab numbering policy used in this document and the relation to the above book.

Exa Example (Solved example)

Eqn Equation (Particular equation of the above book)

AP Appendix to Example(Scilab Code that is an Appednix to a particular Example of the above book)

For example, Exa 3.51 means solved example 3.51 of this book. Sec 2.3 means a scilab code whose theory is explained in Section 2.3 of the book.

Contents

List of Scilab Codes	4
4 Electron Ballistics	5
5 Electron Optics	10
6 Properties of Light	13
7 Interference and Diffraction	15
8 Polarization	18
11 Architectural Acoustics	20
12 Ultrasonics	23
13 Atomic Physics	25
14 Lasers	32
15 Atomic nucleus and nuclear energy	35
16 Structure of Solids	45
17 The Band Theory of Solids	48

18 Semiconductors	50
19 PN Junction Diode	55
21 Magnetic Materials	57
22 Superconductivity	60
23 Dielectrics	62
24 Fibre optics	67
25 Digital electronics	72

List of Scilab Codes

Exa 4.1	Calculation of acceleration time taken and distance covered and kinetic energy of an accelerating proton	5
Exa 4.2	electrostatic deflection	6
Exa 4.3	electron projected at an angle into a uniform electric field	6
Exa 4.4	motion of an electron in a uniform magnetic field	7
Exa 4.5	motion of an electron in a uniform magnetic field acting at an angle	7
Exa 4.6	Magnetostatic deflection	8
Exa 4.7	electric and magnetic fields in crossed configuration	8
Exa 5.1	Electron refraction calculation of potential difference	10
Exa 5.2	Cyclotron	10
Exa 5.4	calculation of linear separation of lines formed on photographic plates	11
Exa 6.1	Optical path calculation	13
Exa 6.2	Coherence length calculation	13
Exa 7.1	plane parallel thin film	15
Exa 7.2	wedge shaped thin film	15
Exa 7.3	Newton's ring experiment	16
Exa 7.4	nonreflecting film	16
Exa 8.2	Polarizer	18
Exa 8.3	calculation of birefringence	18
Exa 11.1	calculation of total absorption and average absorption coefficient	20

Exa 11.2	calculation of average absorption coefficient	20
Exa 11.3	calculation of average absorption coefficient and area	21
Exa 12.1	calculation of natural frequency	23
Exa 12.2	calculation of natural frequency	23
Exa 12.3	calculation of depth and wavelength	24
Exa 13.1	calculation of rate of flow of photons	25
Exa 13.2	calculation of threshold wavelength and stopping potential	26
Exa 13.3	calculation of momentum of Xray photon undergoing scattering	26
Exa 13.4	calculation of wavelength of scattered radiation and velocity of recoiled electrone	27
Exa 13.5	calculation of wavelength of light emitted	28
Exa 13.6	calculation of de Broglie wavelength	28
Exa 13.7	calculation of uncertainty in position	29
Exa 13.8	Energy states of an electron and grain of dust	30
Exa 14.1	calculation of intensity of laser beam	32
Exa 14.2	calculation of intensity of laser beam	32
Exa 14.3	calculation of coherence length bandwidth and line width	33
Exa 14.4	calculation of frequency difference	33
Exa 14.5	calculation of frequency difference	34
Exa 15.1	calculation of binding energy per nucleon	35
Exa 15.2	calculation of energy	35
Exa 15.3	calculation of binding energy	36
Exa 15.4	calculation of binding energy	37
Exa 15.5	calculation of halflife	37
Exa 15.6	calculation of activity	38
Exa 15.7	calculation of age of mineral	38
Exa 15.8	calculation of age of wooden piece	39
Exa 15.9	calculation of energy released	40
Exa 15.10	calculation of crossection	40
Exa 15.11	calculation of final energy	41
Exa 15.12	calculation of amount of fuel	41
Exa 15.13	calculation of power output	42
Exa 15.14	calculation of power developed	43
Exa 15.15	calculation of amount of dueterium consumed	43

Exa 16.1	calculation of density	45
Exa 16.2	calculation of no of atoms	45
Exa 16.3	calculation of distance	46
Exa 16.4	calculation of interatomic spacing	47
Exa 17.1	calculation of velocity of fraction of free electrons	48
Exa 17.2	calculation of velocity of e	48
Exa 17.3	calculation of velocity of fraction of free electrons	49
Exa 18.2	calculation of probability	50
Exa 18.3	calculation of fraction of e in CB	50
Exa 18.4	calculation of fractionional change in no of e	51
Exa 18.5	calculation of resistivity	52
Exa 18.6	calculation of conductivity of intrinsic and doped semiconductors	52
Exa 18.7	calculation of hole concentration	53
Exa 18.8	calculation of Hall voltage	53
Exa 19.1	calculation of potential barrier	55
Exa 19.2	calculation of current	55
Exa 21.1	calculation of magnetizing force and relative permeability	57
Exa 21.2	calculation of magnetization and magnetic flux density	57
Exa 21.3	calculation of relative permeability	58
Exa 22.1	calculation of magnetic field	60
Exa 22.2	calculation of transition temperature	60
Exa 22.3	calculation of temp at which there is max critical field	61
Exa 23.1	calculation of relative permittivity	62
Exa 23.2	calculation of electronic polarizability	62
Exa 23.3	calculation of electronic polarizability and relative permittivity	63
Exa 23.4	calculation of electronic polarizability and relative permittivity	64
Exa 23.5	calculation of ionic polarizability	64
Exa 23.6	calculation of frequency and phase difference	65
Exa 23.7	calculation of frequency	65
Exa 24.1	Fiber optics numerical aperture calculation .	67

Exa 24.2	calculation of acceptance angle	68
Exa 24.3	calculation of normalised frequency	68
Exa 24.4	calculation of normalised frequency and no of modes	69
Exa 24.5	calculation of numerical aperture and maximum acceptance angle	69
Exa 24.6	calculation of power level	70
Exa 24.7	calculation of power loss	70
Exa 25.1	sum of two binary numbers	72
Exa 25.2	sum of two binary numbers	73
Exa 25.3	sum of two binary numbers	73
Exa 25.4	difference of two binary numbers	74
Exa 25.5	difference of two binary numbers	74
Exa 25.6	difference of two binary numbers	75
Exa 25.7	product of two binary numbers	76
Exa 25.8	binary multiplication	76
Exa 25.9	binary division	77
Exa 25.10	binary division	78
Exa 25.11	octal addition	78
Exa 25.12	octal multiplication	79
Exa 25.13	hexadecimal addition	79
Exa 25.14	binary to decimal conversion	80
Exa 25.15	decimal to binary conversion	81
Exa 25.16	decimal to binary conversion	81
Exa 25.17	decimal to octal conversion	83
Exa 25.18	octal to binary conversion	84
Exa 25.19	octal to binary conversion	84
Exa 25.20	binary to octal conversion	87
Exa 25.21	hexa to decimal conversion	90
Exa 25.22	decimal to hexadecimal conversion	90
Exa 25.23	hexa to binary conversion	91
Exa 25.24	binary to hexa conversion	92
Exa 25.25	Subtraction by ones complement method .	92
Exa 25.26	Subtraction by ones complement method .	95
Exa 25.27	Subtraction by ones complement method .	97
Exa 25.28	finding twos complement	100
Exa 25.29	Addition of negative number by twos complement method	101

Exa 25.30 Substraction by twos complement method . 104

Chapter 4

Electron Ballistics

Scilab code Exa 4.1 Calculation of acceleration time taken and distance covered and kinetic energy of an accelerating proton

```
1 clc;clear;
2 //Example 4.1
3 //Calculation of acceleration ,time taken ,distance
   covered and kinetic energy of an accelerating
   proton
4
5 //given values
6 m=1.67*10^-27; //mass of proton in kg
7 q=1.602*10^-19; //charge of proton in Coulomb
8 v1=0; //initial velocity in m/s
9 v2=2.5*10^6; //final velocity in m/s
10 E=500; //electric field strength in V/m
11 //calculation
12 a=E*q/m; //acceleration
13 disp(a,'acceleration of proton in (m/s^2) is : ');
14 t=v2/a; //time
15 disp(t,'time(in s) taken by proton to reach the
   final velocity is : ');
16 x=a*t^2/2; //distance
17 disp(x,'distance (in m)covered by proton in this
   time is : ');
```

```
18 KE=E*q*x; //kinetic energy
19 disp(KE,'kinetic energy(in J) at the time is:');
```

Scilab code Exa 4.2 electrostatic deflection

```
1 clc;clear;
2 //Example 4.2
3 //electrostatic deflection
4 //given values
5 V1=2000;//in volts , potential difference through
           which electron beam is accelerated
6 l=.04;//length of rectangular plates
7 d=.015;//distance between plates
8 V=50;//potential difference between plates
9 //calculations
10 alpha=atan(l*V/(2*d*V1))*(180/%pi); //in degrees
11 disp(alpha,'angle of deflection of electron beam is:
           ');
12 v=5.93*10^5*sqrt(V1); //horizontal velocity in m/s
13 t=l/v; //in s
14 disp(t,'transit time through electric field is:')
```

Scilab code Exa 4.3 electron projected at an angle into a uniform electric field

```
1 clc;clear;
2 //Example 4.3
3 //electron projected at an angle into a uniform
           electric field
4 //given values
5 v1=4.5*10^5; //initial speed in m/s
6 alpha=37*%pi/180; //angle of projection in degrees
7 E=200; //electric field intensity in N/C
8 e=1.6*10^-19; //in C
```

```

9 m=9.1*10^-31; //in kg
10 a=e*E/m; //acceleration in m/s^2
11 t=2*v1*sin(alpha)/a; //time in s
12 disp(t, 'time taken by electron to return to its
initial level is :')
13 H=(v1^2*sin(alpha)*sin(alpha))/(2*a); //height in m
14 disp(H, 'maximum height reached by electron is :')
15 s=(v1^2)*(2*sin(alpha)*cos(alpha))/(2*a); //
displacement in m
16 disp(s, 'horizontal displacement (in m) when it reaches
maximum height is :')

```

Scilab code Exa 4.4 motion of an electron in a uniform magnetic field

```

1 clc;clear;
2 //Example 4.4
3 //motion of an electron in a uniform magnetic field
4 //given values
5 V=200; //potential difference through which electron
is accelerated in volts
6 B=0.01; //magnetic field in wb/m^2
7 e=1.6*10^-19; //in C
8 m=9.1*10^-31; //in kg
9 v=sqrt(2*e*V/m); //electron velocity in m/s
10 disp(v, 'electron velocity is :')
11 r=m*v/(e*B); //in m
12 disp(r, 'radius of path (in m) is :')

```

Scilab code Exa 4.5 motion of an electron in a uniform magnetic field acting at an angle of 30° to the direction of motion

```

1 clc;clear;
2 //Example 4.5

```

```

3 //motion of an electron in a uniform magnetic field
    acting at an angle
4 //given values
5 v=3*10^7; //electron speed
6 B=.23; //magnetic field in wb/m^2
7 q=45*%pi/180; //in degrees ,angle in which electron
    enter field
8 e=1.6*10^-19; //in C
9 m=9.1*10^-31; //in kg
10 R=m*v*sin(q)/(e*B); //in m
11 disp(R, 'radius of helical path is : ')
12 p=2*%pi*m*v*cos(q)/(e*B); //in m
13 disp(p, 'pitch of helical path(in m) is : ')

```

Scilab code Exa 4.6 Magnetostatic deflection

```

1 clc;clear;
2 //Example 4.6
3 //Magnetostatic deflection
4 //given values
5 D=.03; //deflection in m
6 m=9.1*10^-31; //in kg
7 e=1.6*10^-19; //in C
8 L=.15; //distance between CRT and anode in m
9 l=L/2;
10 V=2000; //in volts in wb/
11 B=D*sqrt(2*m*V)/(L*l*sqrt(e)); //in wb/m^2
12 disp(B, 'transverse magnetic field acting (in wb/m^2)
    is : ')

```

Scilab code Exa 4.7 electric and magnetic fields in crossed configuration

```
1 clc;clear;
```

```
2 //Example 4.7
3 //electric and magnetic fields in crossed
   configuration
4 //given values
5 B=2*10^-3; //magnetic field in wb/m^2
6 E=3.4*10^4; //electric field in V/m
7 m=9.1*10^-31; //in kg
8 e=1.6*10^-19; //in C
9 v=E/B; //in m/s
10 disp(v, 'electron speed is :')
11 R=m*v/(e*B); //in m
12 disp(R, 'radius of circular path (in m) when electric
   field is switched off')
```

Chapter 5

Electron Optics

Scilab code Exa 5.1 Electron refraction calculation of potential difference

```
1 clc;clear;
2 //Example 5.1
3 // Electron refraction , calculation of potential
   difference
4
5 //given values
6 V1=250; //potential by which electrons are
   accelerated in Volts
7 alpha1=50*%pi/180; //in degree
8 alpha2=30*%pi/180; //in degree
9 b=sin(alpha1)/sin(alpha2);
10 //calculation
11 V2=(b^2)*V1;
12 a=V2-V1;
13 disp(a, 'potential difference (in volts) is :');
```

Scilab code Exa 5.2 Cyclotron

```

1 clc;clear;
2 //Example 5.2&5.3
3 //Cyclotron , calculation of magnetic induction ,
   maximum energy
4
5 //given values
6 f=12*(10^6); //oscillator frequency in Hertz
7 r=.53; //radius of the dee in metre
8 q=1.6*10^-19; //Deuteron charge in C
9 m=3.34*10^-27; //mass of deuteron in kg
10 //calculation
11 B=2*pi*f*m/q; //
12 disp(B, 'magnetic induction (in Tesla) is : ');
13 E=B^2*q^2*r^2/(2*m);
14 disp(E, 'maximum energy to which deuterons can be
   accelerated (in J) is ')
15 E1=E*6.24*10^18/10^6; //conversion of energy into MeV
16 disp(E1, 'maximum energy to which deuterons can be
   accelerated (in MeV) is ');

```

Scilab code Exa 5.4 calculation of linear separation of lines formed on photographic plates

```

1 clc;clear;
2 //Example 5.4
3 //Mass spectrograph , calculation of linear
   separation of lines formed on photographic plates
4
5 //given values
6 E=8*10^4; //electric field in V/m
7 B=.55 //magnetic induction in Wb/m*2
8 q=1.6*10^-19; //charge of ions
9 m1=20*1.67*10^-27; //atomic mass of an isotope of
   neon
10 m2=22*1.67*10^-27; //atomic mass of other isotope of
   neon

```

```
11 // calculation
12 x=2*E*(m2-m1)/(q*B^2); //
13 disp(x, 'separation of lines (in metre) is:')
```

Chapter 6

Properties of Light

Scilab code Exa 6.1 Optical path calculation

```
1 clc;clear;
2 //Example 6.1
3 //Optical path calculation
4
5 //given values
6 n=1.33; //refractive index of medium
7 x=.75; //geometrical path in micrometre
8 //calculation
9 y=x*n; //
10 disp(y,'optical path (in micrometre) is:')
```

Scilab code Exa 6.2 Coherence length calculation

```
1 clc;clear;
2 //Example 6.2
3 //Coherence length calculation
4
5 //given values
```

```
6 l=1*10^-14; //line width in metre
7 x=10.6*10^-6; //IR emission wavelength in metre
8 //calculation
9 y=x^2/l; //
10 disp(y, 'coherence length(in metre) is :')
```

Chapter 7

Interference and Diffraction

Scilab code Exa 7.1 plane parallel thin film

```
1 clc;clear;
2 //Example 7.1
3 //plane parallel thin film
4
5 //given values
6 x=5890*10^-10; //wavelength of light in metre
7 n=1.5; //refractive index
8 r=60*pi/180; //angle of refraction in degree
9 //calculation
10 t=x/(2*n*cos(r));
11 disp(t*10^6, 'thickness of plate (in micrometre) is : '
);
```

Scilab code Exa 7.2 wedge shaped thin film

```
1 clc;clear;
2 //Example 7.2
3 //wedge shaped thin film
```

```
4
5 //given values
6 x=5893*10^-10; //wavelength of light in metre
7 n=1.5; //refractive index
8 y=.1*10^-3; //fringe spacing
9 //calculation
10 z=x/(2*n*y); //angle of wedge
11 alpha=z*180/%pi; //conversion of radian into degree
12 disp(alpha,'angle of wedge (in degree) is:');
```

Scilab code Exa 7.3 Newtons ring experiment

```
1 clc;clear;
2 //Example 7.3
3 //Newton's ring experiment – calculation of
   refractive index
4
5 //given values
6 D1=1.5; //diametre (in cm)of tenth dark ring in air
7 D2=1.27; //diametre (in cm)of tenth dark ring in
   liquid
8
9
10 //calculation
11 n=D1^2/D2^2;
12 disp(n,'refractive index of liquid is');
```

Scilab code Exa 7.4 nonreflecting film

```
1 clc;clear;
2 //Example 7.4
3 //nonreflecting film
4
```

```
5 //given values
6 l=5500*10^-10; //wavelength of light
7 n1=1.33; //refractive index of water
8 n2=1.52; //refractive index of glass window pane
9 x=sqrt(n1); //to check if it is nonreflecting
10
11 //calculation
12 t=l/(4*n1); //thickness of water film required
13 disp(t*10^6, 'minimum thickness of film (in metre) is
');
```

Chapter 8

Polarization

Scilab code Exa 8.2 Polarizer

```
1 clc;clear;
2 //Example 8.2
3 //Polarizer , calculation of angle
4
5 //given values
6 Io=1; //intensity of polarised light
7 I1=Io/2;//intensity of beam polarised by first by
    first polariser
8 I2=Io/3;//intensity of light polarised by second
    polariser
9
10
11 //calculation
12 a=acos(sqrt(I2/I1));
13 alpha=a*180/%pi;//conversion of angle into degree
14 disp(alpha,'angle between characteristic directions
    (in degree) is');
```

Scilab code Exa 8.3 calculation of birefringence

```
1 clc;clear;
2 //Example 8.3
3 //calculation of birefringence
4
5 //given values
6
7 l=6*10^-7; //wavelength of light in metre
8 d=3*10^-5; //thickness of crystal
9
10
11 //calculation
12 x=l/(4*d);
13 disp(x, 'the birefringance of the crystal is');
```

Chapter 11

Architectural Acoustics

Scilab code Exa 11.1 calculation of total absorption and average absorption coefficient

```
1 clc;clear;
2 //Example 11.1
3 //calculation of total absorption and average
   absorption coefficient
4
5 //given values
6
7 V=20*15*5; //volume of hall in m^3
8 t=3.5; //reverberation time of empty hall in sec
9
10
11 //calculation
12 a1=.161*V/t; //total absorption of empty hall
13 k=a1/(2*(20*15+15*5+20*5));
14 disp(k, 'the average absorption coefficient is');
```

Scilab code Exa 11.2 calculation of average absorption coefficient

```

1 clc;clear;
2 //Example 11.2
3 //calculation of average absorption coefficient
4
5 //given values
6
7 V=10*8*6; //volume of hall in m^3
8 t=1.5; //reverberation time of empty hall in sec
9 A=20; //area of curtain cloth in m^2
10 t1=1; //new reverberation time in sec
11
12 //calculation
13 a1=.161*V/t; //total absorption of empty hall
14 a2=.161*V/t1; //total absorption after a curtain
cloth is suspended
15
16 k=(a2-a1)/(2*20);
17 disp(k,'the average absorption coefficient is');

```

Scilab code Exa 11.3 calculation of average absorption coefficient and area

```

1 clc;clear;
2 //Example 11.3
3 //calculation of average absorption coefficient and
area
4
5 //given values
6
7 V=20*15*10; //volume of hall in m^3
8 t=3.5; //reverberation time of empty hall in sec
9 t1=2.5; //reduced reverberation time
10 k2=.5; //absorption coefficient of curtain cloth
11 //calculation
12 a1=.161*V/t; //total absorption of empty hall
13 k1=a1/(2*(20*15+15*10+20*10));

```

```
14 disp(k1,'the average absorption coefficient is');
15 a2=.161*V/t1; //total absorption when wall is covered
    with curtain
16 a=t1*(a2-a1)/(t1*k2);
17 disp(a,'area of wall to be covered with curtain(in m
    ^2) is :')
```

Chapter 12

Ultrasonics

Scilab code Exa 12.1 calculation of natural frequency

```
1 clc;clear;
2 //Example 12.1
3 //calculation of natural frequency , magnetostriction
4
5 //given values
6
7 l=40*10^-3; //length of pure iron rod
8 d=7.25*10^3; //density of iron in kg/m^3
9 Y=115*10^9; //Young's modulus in N/m^2
10
11 //calculation
12 f=(l*sqrt(Y/d))/(2*pi);
13 disp(f*10^-3, 'the natural frequency (in kHz) is');
```

Scilab code Exa 12.2 calculation of natural frequency

```
1 clc;clear;
2 //Example 12.2
```

```
3 // calculation of natural frequency
4
5 // given values
6
7 t=5.5*10^-3; // thickness in m
8 d=2.65*10^3; // density in kg/m^3
9 Y=8*10^10; // Young's modulus in N/m^2
10
11
12 // calculation
13 f=(sqrt(Y/d))/(2*t); // frequency in hertz
14 disp(f*10^-3, 'the natural frequency (in kHz) is');
```

Scilab code Exa 12.3 calculation of depth and wavelength

```
1 clc;clear;
2 //Example 12.3
3 //calculation of depth and wavelength
4
5 // given values
6
7 f=.07*10^6; //frequency in Hz
8 t=.65; //time taken for pulse to return
9 v=1700; //velocity of sound in sea water in m/s
10
11 // calculation
12 d=v*t/2; //
