# Book Description

**Title:** Machine Design

**Author:** T. H. Wentzell, P. E

**Publisher:** Cengage Learning, New Delhi

**Edition:** 1

**Year:** 2007

**ISBN:** 978-81-315-0878-7

Scilab numbering policy used in this document and the relation to the above book.

**Exa** Example (Solved example)

**Eqn** Equation (Particular equation of the above book)

**AP** Appendix to Example(Scilab Code that is an Appednix to a particular Example of the above book)

For example, Exa 3.51 means solved example 3.51 of this book. Sec 2.3 means a scilab code whose theory is explained in Section 2.3 of the book.

# Contents

|  |    |
|--|----|
| List of Scilab Codes                   | 4  |
| 1 What Is Mechanical Design            | 5  |
| 2 Force Work and Power                 | 7  |
| 3 Stress and Deformation               | 10 |
| 4 Combined Stress and Failure Theories | 18 |
| 5 Repeated Loading                     | 23 |
| 6 Fasteners and Fastening Methods      | 31 |
| 7 Impact and Energy Analysis           | 35 |
| 8 Spring Design                        | 40 |
| 10 Pneumatic and Hydraulic Drives      | 45 |
| 11 Gear Design                         | 48 |
| 12 Spur Gear Design and Selection      | 54 |
| 13 Helical Bevel and Worm Gears        | 63 |

|                                 |    |
|---------------------------------|----|
| 14 Belt and Chain Drives        | 71 |
| 15 Keys and Couplings           | 77 |
| 16 Clutches and Brakes          | 80 |
| 17 Shaft Design                 | 85 |
| 18 Power Screws and Ball Screws | 90 |
| 19 Plain Surface Bearings       | 94 |
| 20 Ball and Roller Bearings     | 96 |

# List of Scilab Codes

|         |   |    |
|---------|---|----|
| Exa 1.2 | Sample Engineering Calculation . . . . .                                | 5  |
| Exa 2.1 | Torque . . . . .  | 7  |
| Exa 2.2 | Work and Power . . . . .  | 7  |
| Exa 2.3 | Force Pressure Relationship . . . . .                                   | 9  |
| Exa 3.1 | Stress and Deflection under Compressive Axial Load . . . . .            | 10 |
| Exa 3.2 | Stress and Deflection due to Bending . . . . .                          | 11 |
| Exa 3.3 | Shear Stress . . . . .  | 13 |
| Exa 3.4 | Torsional Shear Stress . . . . .  | 13 |
| Exa 3.5 | Critical Load in Pinned End Column . . . . .                            | 15 |
| Exa 3.6 | Critical Load in Fixed End Column . . . . .                             | 16 |
| Exa 4.1 | Design of Short Column with Eccentric Load . . . . .                    | 18 |
| Exa 4.2 | Coplanar Shear . . . . .  | 19 |
| Exa 4.3 | Combined Torsion and Shear . . . . .                                    | 19 |
| Exa 4.4 | Combined Normal and Shear Stress . . . . .                              | 20 |
| Exa 5.1 | Design of a Shaft using the Soderberg Method . . . . .                  | 23 |
| Exa 5.2 | Design of a Cantilever Beam using the Soderberg Method . . . . .        | 24 |
| Exa 5.3 | Design of a Cantilever Beam using the Modified Goodman Method . . . . . | 26 |
| Exa 5.4 | Design of Water Pump Connecting Rod . . . . .                           | 27 |
| Exa 5.5 | Factor of Safety for Design with Stress Concentration Factor . . . . .  | 28 |
| Exa 5.6 | Factor of Safety for Design when Desired Life is known . . . . .        | 29 |
| Exa 6.1 | Torquing Method . . . . .   | 31 |
| Exa 6.2 | Turn of Nut Method . . . . .  | 32 |
| Exa 6.3 | Elastic Analysis of Bolted Connections . . . . .                        | 32 |

|          |   |    |
|----------|---|----|
| Exa 6.4  | Elastic Analysis of Bolted Connections . . . .  | 33 |
| Exa 7.1  | Impact Energy . . . . .   | 35 |
| Exa 7.2  | Velocity and Impact . . . . .   | 36 |
| Exa 7.3  | Impact on Beam . . . . .  | 37 |
| Exa 7.4  | Designing for Impact . . . . .  | 38 |
| Exa 8.1  | Design of Helical Compression Spring . . . .  | 40 |
| Exa 8.2  | Determination of number of coils . . . . .  | 41 |
| Exa 8.3  | Stability of Spring . . . . .   | 42 |
| Exa 8.4  | Deflection of Spring . . . . .  | 42 |
| Exa 8.5  | Flat Springs . . . . .  | 43 |
| Exa 8.6  | Energy from Deflection . . . . .  | 44 |
| Exa 10.1 | Calculation of Hydraulic Cylinder Diameter<br>and Standard Rod Size . . . . .                 | 45 |
| Exa 10.2 | Pneumatic Pop Rivet Gun . . . . .   | 46 |
| Exa 11.1 | Double Reduction Spur Gear Set . . . . .  | 48 |
| Exa 11.2 | Double Reduction Spur Gear Set with Idler . . . . .   | 49 |
| Exa 11.3 | Calculation of Pitch Diameter Circular Pitch<br>and Shaft Centre to Centre Distance . . . . . | 50 |
| Exa 11.4 | Bevel Gear . . . . .  | 51 |
| Exa 11.5 | Calculation of Gear Train Value Input and<br>Output Torque and Speed . . . . .                | 52 |
| Exa 11.6 | Precision Spur Gears . . . . .  | 53 |
| Exa 12.1 | Forces on Spur Gear Teeth . . . . .   | 54 |
| Exa 12.2 | Surface Speed . . . . .   | 55 |
| Exa 12.3 | Strength of Gear Teeth . . . . .  | 55 |
| Exa 12.4 | Dynamic Load . . . . .  | 56 |
| Exa 12.5 | Calculation of Factor of Safety Used in Catalog . . . . .                                     | 57 |
| Exa 12.6 | Spur Gear Design . . . . .  | 58 |
| Exa 12.7 | Buckingham Method of Gear Design . . . . .  | 59 |
| Exa 12.8 | Wear of Gears . . . . .   | 61 |
| Exa 13.1 | Helical Gears . . . . .   | 63 |
| Exa 13.2 | Helical Gear Stresses . . . . .   | 64 |
| Exa 13.3 | Bevel Gear Forces . . . . .   | 65 |
| Exa 13.4 | Worm Gear Forces . . . . .  | 66 |
| Exa 13.5 | Calculation of Normal Circular Pitch Dynamic<br>Load Force Allowable . . . . .                | 68 |
| Exa 13.6 | Efficiency of Worm Gear Drive . . . . .   | 69 |
| Exa 13.7 | Heat Generated . . . . .  | 70 |

|          |   |    |
|----------|---|----|
| Exa 14.1 | Calculation of Front Force Net Driving Force<br>Force on Shaft etc . . . . .            | 71 |
| Exa 14.2 | Calculation of Angle of Contact Length of<br>Belt Ratio and Surface Speed etc . . . . . | 72 |
| Exa 14.3 | V Belts . . . . .   | 73 |
| Exa 14.4 | Chain Drive . . . . .   | 74 |
| Exa 15.1 | Design of Keys . . . . .  | 77 |
| Exa 15.2 | Splines . . . . .   | 78 |
| Exa 16.1 | Calculation of Torque and Power . . . . .   | 80 |
| Exa 16.2 | Determination of Breaking Torque . . . . .  | 81 |
| Exa 16.3 | Torque Transmitting Capacity . . . . .  | 81 |
| Exa 16.4 | Calculation of Stopping Force Torque per Brake<br>Normal Brake Force etc . . . . .      | 82 |
| Exa 16.5 | Rotational Inertia and Brake Power . . . . .  | 83 |
| Exa 17.1 | Design Stresses in Shaft . . . . .  | 85 |
| Exa 17.2 | Combined Stresses in Shaft . . . . .  | 86 |
| Exa 17.3 | Combined Stress Using Maximum Normal Stress<br>Theory . . . . .                         | 87 |
| Exa 17.4 | Comparison of Stresses to Allowable Values<br>and Endurance Limit . . . . .             | 87 |
| Exa 17.5 | Critical Speed . . . . .  | 88 |
| Exa 18.1 | Torque and Power in Power Screw . . . . .   | 90 |
| Exa 18.2 | Efficiency of a Power Screw . . . . .   | 90 |
| Exa 18.3 | Acme Threads . . . . .  | 91 |
| Exa 18.4 | Torque and Ball Screws . . . . .  | 92 |
| Exa 19.1 | Shaft Considerations . . . . .  | 94 |
| Exa 19.2 | Wear . . . . .  | 95 |
| Exa 20.1 | Life Expectancy of Ball Bearing . . . . .   | 96 |
| Exa 20.2 | Selection of Bearing to Meet Given Criteria   | 96 |
| Exa 20.3 | Selection of Bearing to Meet Given Criteria   | 97 |
| Exa 20.4 | Life of 6200 Series Bearing . . . . .   | 99 |

# Chapter 1

## What Is Mechanical Design

Scilab code Exa 1.2 Sample Engineering Calculation

```
1  clc;
2  clear;
3  mprintf('MACHINE DESIGN \n Timothy H. Wentzell, P.E.
          \n EXAMPLE-1.2   Page 13  ')    //Example 1.2
4
5  Sy=61000                                //[psi] Tensile strength
      of AISI 1020 cold drawn steel from Appendix 4
      Page no 470
6  SF=2;                                  //[ ] safety factor
7  F=300;                                  //[lb] Weight of the ball
8  L=36;                                   //[in] Length of round
      bar
9  Sy=61000;                               //[psi] Tensile strength
      from Appendix 4
10 M=F*L;                                  //[in*lb] Bending moment
      Appendix 2
11
12 Sall=Sy/SF;                             //[psi] Allowable stress
13 Z=M/Sall;                               //[in^3] Section modulus
      for bending Sall=M/Z
14 D=(32*Z/%pi)^(1/3);                    //[in] Diameter of bar
```

```

15
16 //Use 13/8 in bar
17 D1=1.625;
18
19 mprintf('\n\n Diameter of Bar is %f in',D1);
20
21 //Checking Deflection
22 I=%pi*D1^4/64; // [in^4] Moment of
    inertia Appendix 3
23 E=30*10^6; // [lb/in^2] Modulus of
    elasticity
24 Delta=F*L^3/(3*E*I); // [in] Deflection
25
26 //Note- In the book I=0.342 in^4 is used instead of
    I=0.3422814 in^4
27
28 mprintf('\n The deflection of bar is %f in',Delta);
29
30
31 //Note: The deviation of answer from the answer
    given in the book is due to round off error.(In
    the book values are rounded while in scilab
    actual values are taken)

```

# Chapter 2

## Force Work and Power

Scilab code Exa 2.1 Torque

```
1 clc;
2 clear;
3 mprintf('MACHINE DESIGN \n Timothy H. Wentzell, P.E.
         \n EXAMPLE-2.1   Page 26  ') //Example 2.1
4
5 T=1080*12; // [in*lb] Torque in axle
6 d=30; // [in] Diameter of tire
7 F=T/(d/2); // [lb] Force exerted on
         the road surface
8
9 mprintf('\n\n The tire exerts %f lb force on the
         road surface',F);
```

---

Scilab code Exa 2.2 Work and Power

```
1 clc;
2 clear;
3 mprintf('MACHINE DESIGN \n Timothy H. Wentzell, P.E.
         \n EXAMPLE-2.2   Page 28  ') //Example 2.2
```

```

4
5 G=3.6; // Differential ratio
6 N=3500/G; // [rpm] Axle
    rotational speed
7 d=30; // [in] Diameter of
    tire
8 dist=N/(60)*(%pi*d) // [in] Distance
    traveled in 1 sec
9 dist=dist/12; // [ft] Distance
    traveled in 1 sec
10 t=1; // [sec] Time period
11 F=864; // [lb] Force
    exerted by tire on road surface
12
13 W=F*dist; // [ft*lb] Workdone
    in 1 sec
14 P=F*dist/t; // [ft*lb/sec] Power
15 hp=P/550; // [hp] Power in
    horse power 1hp=550 ft*lb/sec
16
17 mprintf('\n\n Power to do work %f hp',hp);
18
19 //Comparing it to motor output:
20
21 Tm=300*12; // [in*lb] Engine
    torque
22 Nm=3500; // [rpm] Engine
    speed
23 Pm=Tm*Nm/63000;
24
25 mprintf('\n Motor output %f hp',Pm);
26 mprintf('\n The power output equaled the power at
    tire/road surface. ');
27
28 //Note: The deviation of answer from the answer
    given in the book is due to round off error.(In
    the book values are rounded while in scilab
    actual values are taken)

```

---

**Scilab code Exa 2.3 Force Pressure Relationship**

```
1  clc;
2  clear;
3  mprintf('MACHINE DESIGN \n Timothy H. Wentzell, P.E.
          \n EXAMPLE-2.3   Page 29  ')    //Example 2.3
4
5  T=300*12;           //[in*lb] Engine torque
6  d=8;                //[in] Crankshaft effective
   diameter
7
8  F=T/(d/2);         //[lb] Force exerted by
   piston
9
10 A=%pi*(2^2)/4;     //[in^2] Area of cross
   section of piston
11 P=F/A;             //[lb/in^2] Pressure in
   cylinder
12
13 mprintf('\n\n Pressure inside cylinder %f lb/in^2',P
   );
```

---

# Chapter 3

## Stress and Deformation

Scilab code Exa 3.1 Stress and Deflection under Compressive Axial Load

```
1  clc;
2  clear;
3  mprintf('MACHINE DESIGN \n Timothy H. Wentzell, P.E.
          \n EXAMPLE-3.1    Page No-41 \n');
4
5  F=20000;           //[lb] Load applied to steel
   bar
6  L=6;              //[in] Length of steel bar
7  d=1;              //[in] Diameter of steel bar
8  A=%pi*(d^2)/4;    //[in^2] Area of cross
   section of steel bar
9  E=30*10^6;        //[lb/in^2] Modulus of
   elasticity for AISI 1020 hot-rolled steel
10 Sy=30000;         //[lb/in^2] Yield limit
11
12 S=F/A;            //[lb/in^2] Stress in bar
13 mprintf('\na. Stress in bar=%f lb/in^2.',S);
14
15 delta=F*L/(A*E);  //[in] Change in length of
   bar
16 mprintf('\nb. bar shorten by %f in.',delta);
```

```

17
18 if Sy>S then
19     mprintf(' \nc. The stress of %f psi is less than
        Sy of %f psi, so it will\n return to its
        original size because the yield limit was not
        exceeded. ',S,Sy);
20 else
21     mprintf('The bar will not return to its original
        length ')
22 end
23
24 //Note: The deviation of answer from the answer
        given in the book is due to round off error.(In
        the book values are rounded while in scilab
        actual values are taken)

```

---

### Scilab code Exa 3.2 Stress and Deflection due to Bending

```

1 clc;
2 clear;
3 mprintf('MACHINE DESIGN \n Timothy H. Wentzell, P.E.
        \n EXAMPLE-3.2 Page No.43\n ');
4
5 b=2; // [in] Width of beam
6 h=2; // [in] Height of beam
7 I=(b*h^3)/12; // [in^4] Moment of inertia
8 F=3000; // [lb] Load applied to
        beam
9 L=36; // [in] Length of beam
10 c=1; // [in] Distance of outer
        most fiber from neutral axis
11 E=30*10^6; // [lb/in^2] Modulus of
        elasticity
12 Sy=30000; // [lb/in^2] Yield strength
13 Su=55000; // [lb/in^2] Ultimate

```

```

    strength
