# Book Description

**Title:** Principles Of Electronic Instrumentation

**Author:** D. Patranabis

**Publisher:** PHI Learning Pvt. Ltd., New Delhi

**Edition:** 2

**Year:** 2009

**ISBN:** 978-81-203-3355-0

Scilab numbering policy used in this document and the relation to the above book.

**Exa** Example (Solved example)

**Eqn** Equation (Particular equation of the above book)

**AP** Appendix to Example(Scilab Code that is an Appednix to a particular Example of the above book)

For example, Exa 3.51 means solved example 3.51 of this book. Sec 2.3 means a scilab code whose theory is explained in Section 2.3 of the book.

# Contents

List of Scilab Codes	4
1 Basic Concepts	5
2 Measurement Of Electrical Quantities	11
3 Digital Elements and Features	20
4 Combinational And Sequential Logic Circuits	24
5 ADC and DAC	36
6 Cathode Ray Oscilloscope	42
7 Phase Frequency and Time	50
8 Q factor Power and Power Factor	56
9 Analyzers	66
10 Bridge Circuits	70
11 Test Signal Generation	81
12 Display Record And Acquisition Of Data	89
13 Shielding And Grounding	96
14 Transducers And The Measurement System	99

# List of Scilab Codes

Exa 1.1	unknown resistance . . . . .	5
Exa 1.2	unknown resistance . . . . .	5
Exa 1.3	find ammeter reading . . . . .	6
Exa 1.4	unknown resistance . . . . .	7
Exa 1.5	find input voltage . . . . .	7
Exa 1.6	find shunt resistance . . . . .	8
Exa 1.7	find series resistor . . . . .	8
Exa 1.8	sensitivity . . . . .	9
Exa 1.9	error in measurement . . . . .	9
Exa 2.1	output voltage . . . . .	11
Exa 2.2	find Ad CMRR and Acm . . . . .	12
Exa 2.3	find full scale output and input min . . . . .	13
Exa 2.4	output voltage . . . . .	14
Exa 2.5	find unknown resistance . . . . .	14
Exa 2.6	find CMRR . . . . .	15
Exa 2.7	tolerance in parameters . . . . .	15
Exa 2.8	output voltage . . . . .	16
Exa 2.9	difference in output voltage . . . . .	17
Exa 2.10	find crest factor . . . . .	18
Exa 2.11	find unknown resistance . . . . .	18
Exa 3.1	equivalence comparator . . . . .	20
Exa 3.2	antivalence comparator . . . . .	20
Exa 3.3	simplify Boolean function . . . . .	21
Exa 3.4	simplify Boolean function . . . . .	21
Exa 3.5	obtain truth table . . . . .	22
Exa 3.6	scheme of gates . . . . .	23
Exa 4.1	find output and carry . . . . .	24
Exa 4.2	find difference and borrow . . . . .	25

Exa 4.3	find final output . . . . .	26
Exa 4.4.a	decoder output . . . . .	26
Exa 4.4.b	decoder output . . . . .	28
Exa 4.5	convert 8421 to2421 code . . . . .	29
Exa 4.6	Xcess 3 code . . . . .	30
Exa 4.7	8 to 1 MUX . . . . .	31
Exa 4.8	truth table of RS flip flop . . . . .	32
Exa 4.9	JK flip flop . . . . .	33
Exa 4.10	3 bit binary counter . . . . .	34
Exa 4.11	6 modulo counter . . . . .	34
Exa 4.12	3 bit 5 modulo counter . . . . .	35
Exa 5.1	output voltage . . . . .	36
Exa 5.2	voltage division ratio and feedback resistor . . . . .	36
Exa 5.3	output voltage . . . . .	37
Exa 5.4	find count . . . . .	38
Exa 5.5	find integrator output voltage . . . . .	38
Exa 5.6	find rise in output voltage and charging time . . . . .	39
Exa 5.7	find count of counter . . . . .	39
Exa 5.8	find input voltage . . . . .	40
Exa 5.9	conversion number . . . . .	40
Exa 5.10	signal to noise ratio . . . . .	41
Exa 6.1	calculate ADC speed . . . . .	42
Exa 6.2	find frequency at horizontal plate . . . . .	42
Exa 6.3	find length of vertical axis of ellipse . . . . .	43
Exa 6.4	find voltage applied between plates . . . . .	43
Exa 6.5	deflection sensitivity . . . . .	44
Exa 6.6	find deflection of electron . . . . .	45
Exa 6.7	cutoff frequency of filter . . . . .	45
Exa 6.8	phase difference . . . . .	46
Exa 6.9	rise time of pulse . . . . .	47
Exa 6.10	find speed of conversion . . . . .	47
Exa 6.11	find total collector resistance . . . . .	48
Exa 6.12	deflection plates voltage . . . . .	48
Exa 7.1	find pulse width . . . . .	50
Exa 7.2	detector sensitivity . . . . .	50
Exa 7.3	phase measured . . . . .	51
Exa 7.4	measured phase difference . . . . .	51
Exa 7.5	find phase difference . . . . .	52

Exa 7.6	states for stages required . . . . .	52
Exa 7.7	find time base division . . . . .	53
Exa 7.8	frequency of sinusoid . . . . .	54
Exa 7.9	count of counter . . . . .	54
Exa 7.10	find time between events . . . . .	55
Exa 8.1	inductance and Q factor of coil . . . . .	56
Exa 8.2	truncation error . . . . .	57
Exa 8.3	find ratio error and phase angle . . . . .	57
Exa 8.4	inductor Q factor and resistance . . . . .	59
Exa 8.5	actual Q factor and resistance . . . . .	60
Exa 8.6	find Q factor . . . . .	60
Exa 8.7	find lag . . . . .	61
Exa 8.8	find truncation error . . . . .	61
Exa 8.9	find frequency of PF meter . . . . .	62
Exa 8.10	calculate ratio error and phase angle . . . . .	63
Exa 8.11	calculate ratio error and phase angle . . . . .	64
Exa 9.1	variable frequency oscillator . . . . .	66
Exa 9.2	DFT coefficients . . . . .	66
Exa 9.3	find improvement ratio . . . . .	67
Exa 9.4	find distortion factor . . . . .	68
Exa 9.5	find percentage change in feedback . . . . .	68
Exa 9.6	time uncertainty and measurable time . . . . .	69
Exa 10.1	wheatstone bridge . . . . .	70
Exa 10.2	high resistance measurement bridge . . . . .	71
Exa 10.3	capacitance and resistance of AC bridge . . . . .	72
Exa 10.4	schering bridge . . . . .	73
Exa 10.5	wein bridge . . . . .	73
Exa 10.6	balance condition in wein bridge . . . . .	74
Exa 10.7	relation between $V_o$ and $t$ for $V_i$ given . . . . .	74
Exa 10.8	find deflection in galvanometer . . . . .	75
Exa 10.9	find insulating post resistance . . . . .	76
Exa 10.10	maxwell bridge . . . . .	77
Exa 10.11	hay bridge . . . . .	78
Exa 10.12	find $C_1$ $C_3$ and dissipation factor . . . . .	78
Exa 10.13	wein bridge . . . . .	79
Exa 11.1	limits of duty cycle . . . . .	81
Exa 11.2	determine sinewave amplitude and segment slopes . . . . .	82
Exa 11.3	find inductance . . . . .	83

Exa 11.4	resonance frequency of crystal . . . . .	84
Exa 11.5	find R in CR section . . . . .	84
Exa 11.6	find phase difference in wein network . . . . .	85
Exa 11.7	digital frequency synthesizer . . . . .	86
Exa 11.8	find controlling voltage . . . . .	87
Exa 11.9	find limits of duty factor . . . . .	87
Exa 11.10	find output voltage V1 and V2 . . . . .	88
Exa 12.1	find excitation voltage and electrode areas . . . . .	89
Exa 12.2	find deviation factor . . . . .	90
Exa 12.3	find wavelength of radiation . . . . .	91
Exa 12.4	thickness of LCD crystal . . . . .	91
Exa 12.5	find current density . . . . .	92
Exa 12.6	find magnetic flux in tape . . . . .	92
Exa 12.7	channel accomodation . . . . .	93
Exa 12.8	sensor signal transmission . . . . .	94
Exa 12.9	ROM access time . . . . .	94
Exa 13.1	find diagnostic ratio . . . . .	96
Exa 13.2	find diagnostic ratio . . . . .	97
Exa 13.3	find ground loop current . . . . .	98
Exa 14.1	find percentage change in resistance . . . . .	99
Exa 14.2	find bridgemann coefficient . . . . .	99
Exa 14.3	pt100 RTD . . . . .	100
Exa 14.4	sensivity in measurement of capacitance . . . . .	101
Exa 14.5	find max gauge factor . . . . .	101
Exa 14.6	find Young modulus . . . . .	102
Exa 14.7	find capacitance of sensor . . . . .	102
Exa 14.8	find ratio of collector currents . . . . .	103
Exa 14.9	find normalized output . . . . .	103
Exa 14.10	find load voltage . . . . .	105
Exa 14.11	find error and sensivity parameters . . . . .	105
Exa 15.1	find increamental phase . . . . .	108
Exa 15.2	find additional length travelled . . . . .	109
Exa 15.3	find interacting length . . . . .	109
Exa 15.4	wavelength suitable for laser light . . . . .	110
Exa 15.5	find rate of change of RI wrt T . . . . .	110

# Chapter 1

## Basic Concepts

Scilab code Exa 1.1 unknown resistance

```
1 //chapter1 ,Example1_1 ,pg 481
2
3 Ir=10*10^-3//current drawn by resistor
4
5 Vr=100//voltage across resistor
6
7 Rv=40*10^3//voltmeter resistance
8
9 Ru=(Vr/Ir)*(1/(1-(Vr/(Ir*Rv))))//unknown resistance
10
11 printf("output resistance\n")
12
13 printf("\nRu=%0.2 f ohm" ,Ru)
```

---

Scilab code Exa 1.2 unknown resistance

```
1 //chapter1 ,Example1_2 ,pg 481
2
```

```

3 Ir=10*10^-3//current drawn by resistor
4
5 Vr=100//voltage across resistor
6
7 Rv=40*10^3//voltmeter resistance
8
9 Ra=1//ammeter resistance
10
11 Ru=(Rv/Ir)-Ra//unknown resistance
12
13 printf("output resistance\n")
14
15 printf("\nRu=%0.2 f ohm", Ru)

```

---

**Scilab code Exa 1.3** find ammeter reading

```

1 //chapter1 ,Example1_3 ,pg 481
2
3 Rv=40*10^3//voltmeter resistance
4
5 Ra=1//ammeter resistance
6
7 Vr=40//voltmeter reading
8
9 Ru=10*10^3//unknown resistance
10
11 Ir=(Vr*(Rv+Ru))/(Ru*Rv)//current reading -case1
12
13 printf("ammeter reading case1\n")
14
15 printf("\nIr=%0.4 f A", Ir)
16
17 Ir1=(Vr/(Ru+Ra))//current reading -case2
18
19 printf("\nammeter reading case2\n")

```

```
20
21 printf("\nIr1=%0.4 f A", Ir1)
```

---

**Scilab code Exa 1.4** unknown resistance

```
1 //chapter1 ,Example1_4 ,pg 482
2
3 Vs=3//supply voltage
4
5 Vu=2.75//voltmeter reading
6
7 Rp=10*10^3//parallel resistance
8
9 Ru=Rp*((Vs/Vu)-1)//unknown resistance
10
11 printf("unknown resistance\n")
12
13 printf("\nRu=%0.2 f ohm", Ru)
```

---

**Scilab code Exa 1.5** find input vlotage

```
1 //chapter1 ,Example1_5 ,pg 482
2
3 //with input voltage exceding 2Vd,diodes conduct and
   the voltage divider circuit with diodes can
   allow only a Vi given by Vi=2Vd
4
5 printf("\ninput voltage to amplifier\n")
6
7 printf("\nVi=2Vd")
```

---

**Scilab code Exa 1.6** find shunt resistance

```
1 //chapter1 ,Example1_6 ,pg 482
2
3 Rm=1000//meter resistance
4
5 Is=900*10^-6//shunt current
6
7 Vm=100*10^-3//drop across meter
8
9 Rs=Vm/Is//ohm's law
10
11 It=1*10^-3
12
13 // Is=It*(Rm/(Rs+Rm))
14
15 Rs=(Rm*(It-Is))/Is
16
17 printf("\nshunt resistance\n")
18
19 printf("\nRs=%0.2f ohm",Rs)
```

---

**Scilab code Exa 1.7** find series resistor

```
1 //chapter1 ,Example1_7 ,pg 483
2
3 If=100*10^-6//full scale current
4
5 Rm=1000//meter resistance
6
7 Vf=10//full scale voltage
8
9 Rs=(Vf/If)-Rm//series resistance
10
11 printf("\nseries resistance\n")
```

```
12
13 printf("\Rs=%0.2 f ohm" ,Rs)
```

---

#### Scilab code Exa 1.8 sensitivity

```
1 //chapter1 ,Example1_8 ,pg 483
2
3 If=100*10^-6
4
5 S=1/If
6
7 printf("\nsensitivity\n")
8
9 printf("\nS=%0.2 f ohm/volt" ,S)
```

---

#### Scilab code Exa 1.9 error in measurment

```
1 //chapter1 ,Example1_9 ,pg 483
2
3 //assume that the voltmeter full scale reading is 12
  V which gives its resistance as 1.2*10^6 ohm
  which is in parallel with 10*10^6 ohm making as
  equivalent of Rq given as
4
5 R=1.2*10^6 //voltmeter resistance
6
7 R1=10*10^6 //voltage divider resistance
8
9 Rq=(R*R1)/(R+R1) //equivalent resistance
10
11 Vin=12 //input voltage to divider network
12
13 Rs=4*10^6 //series resistance
```

```
14
15 Vq=(Rq*Vin)/(Rq+Rs)//voltage across equivalent
    combination
16
17 Va=(R1*Vin)/(R1+Rs)//actual volatge
18
19 er=(Vq-Va)/Va//error
20
21 printf("\nerror in measurement\n")
22
23 printf("\ner=%0.3f ",er)
```

---

## Chapter 2

# Measurement Of Electrical Quantities

Scilab code Exa 2.1 output voltage

```
1 //chapter2 ,Example2_1 ,pg 23
2
3 //for fig. 2.7
4
5 ic=1*10^-3//constant current source
6
7 Rf=15*10^3//feedback resistance
8
9 Rs=10*10^3//input resistance
10
11 Rx=1*10^3//unknown resistance
12
13 Vo1=ic*Rf*(Rx/(1+(Rx*Rs)))//output voltage case-1
14
15 printf("output voltage for case-1\n")
16
17 printf("\nVo1=%0.4 f V\n",Vo1)
18
19 //for fig. 2.8
```

```

20
21 R1=10//unknown resistance
22
23 R2=1*10^3//input resistance
24
25 Vo2=ic*Rx*(R1/(1+R1*R2))//output voltage case-2
26
27 printf("output voltage for case-2\n")
28
29 printf("\nVo2=%0.4 f V\n",Vo2)

```

---

**Scilab code Exa 2.2** find Ad CMRR and Acm

```

1 //chapter2 ,Example2-2 ,pg 22
2
3 V1=5//input-1
4
5 V2=5//input-2
6
7 V12=50*10^-3//difference input
8
9 Vo=2//output voltage
10
11 acc=0.01//accuracy
12
13 Ad=(Vo/V12)//diffrential gain
14
15 //error at the output should be less than (2/100)V
    or 20mV.if common mode gain is the only source of
    error then
16
17 err=Vo*acc//error
18
19 Acm=(err/V1)//common mode gain
20

```

```

21 CMRR=20*log10(Ad/Acm)//common mode rejection ratio
    in dB
22
23 printf(" differential gain \n")
24
25 printf("\nAd=%0.1 f \n",Ad)
26
27 printf("common mode gain \n")
28
29 printf("\nAcm=%0.4 f \n",Acm)
30
31 printf("\nCMRR=%0.1 f dB\n",CMRR)

```

---

**Scilab code Exa 2.3** find full scale output and input min

```

1 //chapter -2,Example2_3 ,pg 484
2
3 Aol=10*10^4//open loop gain
4
5 R2=10*10^3
6
7 R3=10*10^3
8
9 R1=100*10^3//input resistance
10
11 Vac=24//maximum input
12
13 Vo=(R2/R1)*Vac//output full scale
14
15 printf("output FS voltage\n")
16
17 printf("Vo=%0.2 f V\n",Vo)
18
19 Vth=0.6//threshold voltage
20

```

```

21 Vn=(Vth/Ao1)//minimum input
22
23 printf("minimum input voltage\n")
24
25 printf("Vn=%0.8 f V\n",Vn)

```

---

**Scilab code Exa 2.4** output voltage

```

1 //chapter -2,Example2_4 ,pg 484
2
3 Vp=1//peak input voltage
4
5 f=50//frequency
6
7 //R1=R2
8
9 //since halfwave rectification is done,integration
   gives the value
10
11 Vo=0.5*((2*Vp)/3.14)//output voltage ,pi=3.14
12
13 printf("output voltage\n")
14
15 printf("Vo=%0.4 f V\n",Vo)

```

---

**Scilab code Exa 2.5** find unknown resistance

```

1 //chapter -2,Example2_5 ,pg 484
2
3 ic=0.1*10^-3//constant current source
4
5 Vo=2//output voltage
6

```

```

7 Rf=22*10^3//feedback resistance
8
9 Rs=10*10^3//input resistance
10
11 Rx=(1/(((ic*Rf)/(Vo*Rs))-(1/Rs)))/unknown
    resistance
12
13 printf("unknown resistance\n")
14
15 printf("Rx=%.2 f ohm\n",Rx)

```

---

**Scilab code Exa 2.6** find CMRR

```

1 //chapter -2,Example2_6 ,pg 484
2
3 a=0.9//parameter of diff. amplr.
4
5 b=1.1//parameter of diff. amplr.
6
7 CMRR=0.5*(((1+a)*b+(1+b)*a))/((1+a)*b-(1+b)*a)//
    common mode rejection ratio
8
9 printf("CMRR=%.2 f \n", CMRR)

```

---

**Scilab code Exa 2.7** tolerance in parameters

```

1 //chapter -2,Example2_7 ,pg 485
2
3 CMRR=10*10^4//common mode rejection ratio
4
5 //set a=beta+k1*delbeta and b=beta(-/+ )k2*delbeta
6

```

```

7 //CMRR=0.5*((4(+/-)3*delbeta*(k1-k2))/((+/-)delbeta
   *(k1-k2)))
8
9 //CMRR=0.5*((4(+/-)3*(a1-a2))/((+/-)(a1-a2)))
10
11 //a1->k1*delbeta , a2->k2*delbeta
12
13 delalpha=(2/CMRR)//a1-a2=delalpha
14
15 printf("tolerance in parameters\n")
16
17 printf("delalpha=%0.7f \n",delalpha)
18
19 printf("Therefore , if a varies by 1 percent , b
   should not vary more than 2*10^-3 percent of
   variation of a ")

```

---

#### Scilab code Exa 2.8 output voltage

```

1 //chapter -2,Example2_8 , pg 485
2
3 R1=10*10^3
4
5 R2=10*10^3
6
7 V1=10//input voltage -1
8
9 V2=10//input voltage -2
10
11 R31=10*10^3//R3, case -1
12
13 Vo1=((1+(R2/R1)+(R2/R31))*V1)-(R2/R1)*V2//output
   voltage case -1
14
15 printf("output voltage case -1\n")

```

```

16
17 printf("Vo1=%0.2 f V\n",Vo1)
18
19 R32=100*10^3//R3, case -2
20
21 Vo2=((1+(R2/R1)+(R2/R32))*V1)-(R2/R1)*V2//output
    voltage case -2
22
23 printf("output voltage case -2\n")
24
25 printf("Vo2=%0.2 f V\n",Vo2)
26
27 R33=1000*10^3//R3, case -3
28
29 Vo3=((1+(R2/R1)+(R2/R33))*V1)-(R2/R1)*V2//output
    voltage case -3
30
31 printf("output voltage case -3\n")
32
33 printf("Vo3=%0.2 f V",Vo3)

```

---

**Scilab code Exa 2.9** difference in output voltage

```

1 //chapter -2,Example2_9 , pg 486
2
3 //(R3/R1)=0.98^-1(R2/R4)
4
5 R1=10*10^3
6
7 R3=10*10^3
8
9 I1=130*10^-6
10
11 Vo1=R1*(1+0.98)*I1//output for case -1, (R2/R4)=0.98
12

```

```

13 // (R1/R3)=(R4/R2)
14
15 Vo2=R1*(1+(R3/R1))*I1 //output for case-2
16
17 Vo12=((Vo2-Vo1)/Vo2)*100 //percent difference
18
19 printf(" difference in output voltage\n")
20
21 printf("Vo12=%0.4 f ohm",Vo12)

```

---

**Scilab code Exa 2.10** find crest factor

```

1 //chapter-2,Example2_10 ,pg 486
2
3 dutcyc=0.4 //duty cycle
4
5 CF=sqrt((1-dutcyc)/dutcyc) //crest factor
6
7 printf("crest factor\n")
8
9 printf("CF=%0.4 f ",CF)

```

---
